INVESTMENT OBJECTIVE

The aim of the model portfolio is to increase in value, over a minimum of 5 years, by investing in a range of asset classes and global markets. This will be achieved through a combination of capital growth, which is profit on investments held, and income, which is money paid out of investments such as dividends from shares and interest from bonds.

ABACUS ESG PROFILE 7 - DFM

FACTSHEET
February 2024

ESG Score

We measure how well key medium-to long-term ESG risks and opportunities are being managed by the portfolio using the MSCI ESG Quality Score, which is measured on a scale of 0 to 10 (worst to best). The score corresponds to a rating, which is measured on a scale of CCC to AAA (worst to best).

Rating	CCC	B	BB	BBB	A	AA	AAA
Score	0.00 - 3.15	3.15 - 4.16	4.16 - 5.17	5.17 - 6.18	6.18 - 7.19	7.19 - 8.20	8.20-10.00
	Laggard		Average			Leader	

Carbon Risk

Companies which emit lots of carbon dioxide (CO2) are more exposed to carbon-related market and regulatory risks that arise due to climate change. We measure the carbon risk of the portfolio using the MSCI ESG Weighted Average Carbon Intensity metric which, per company, is a function of the most recently reported or estimated direct plus indirect CO2 emissions, divided by sales (the lower the intensity, the better).

Very Low	Low	Moderate	High	Very High
0 - 14	15 - 69	70 - 249	250 - 524	525 - 1000
Leader		Average	Laggard	

Impact Solutions Involvement

We measure the positive impact achieved by the portfolio using MSCI ESG Sustainable Impact Solutions Involvement data. The aggregated figure represents the full market value exposure to a range of impact solutions, which fall under the following categories: climate change, natural capital, basic needs and empowerment (in all cases, the higher the better).

Controversial Business Activity Involvement

We measure the full market value exposure of the portfolio to a range of controversial business activities using MSCI ESG Business Involvement Screening Research Involvement data. These activities are: adult entertainment, alcohol, civilian firearms, weapons, gambling, genetic engineering, thermal coal and tobacco (in all cases, the lower the better).

ESG UPDATE

Most investors in a sustainability-labelled investment product would naturally expect there to be some exposure to the end products of the decarbonisation supply chain, namely things like wind turbines, heat pumps and electric vehicles. Fewer investors would expect there to be exposure to the picks and shovels of this supply chain, for example the manufacturers of copper wiring or steel. Fewer still would expect there to be any exposure to the companies mining the raw materials required to build the steel that is required to build wind turbines. This is mostly because these less visible parts of the supply chain have struggled with a variety of environmental and social challenges for many years. However, since the decarbonisation of our energy system is not possible without the full supply chain (or without complimentary solutions like nuclear power), we think it makes good sense to learn as much about these challenges as we can in order to more fully understand the sustainability risks and opportunities of decarbonisation. To that end, we are currently conducting research with the LSE Green Finance Society on this topic and look forward to sharing our findings in due course. Although not a large part of our investable universe at the moment, we have reason to believe that in the future the less visible parts of the decarbonisation supply chain will begin to feature more in sustainability-labelled investment products, in part thanks to a suite of new product labels that will be introduced later this year as part of the FCA's Sustainability Disclosure Requirements (SDR).

The model portfolio is available on the Tavistock Platform, Aegon (ARC), Abrdn Wrap, and Aviva.

Investors are required to read the Key Investor Information Document (KIID) for the underlying holdings before investing. This documentation is publicly available free of charge. The Abacus ESG DFM model portfolios (profiles) are based on a series of model portfolios managed by Abacus Associates, on an advisory basis, since 2015. To calculate the backtested data for these DFM model portfolios, Tavistock Asset Management have taken historical model portfolio data, provided by Abacus Associates, and applied re-balances on the 1st of January each year as well as applying a 0.29% DFM fee. Historical returns of these DFM model portfolios (profiles) may differ from clients in the advisory model portfolios for a variety of reasons; i) the DFM model portfolios have a 0.29% DFM Fee and the advisory model portfolios have no DFM fee ii) the DFM model portfolios have assumed a single, annual re-balance and the advisory model portfolios may have been re-balanced more or less frequently for individual clients iii) the DFM model portfolios use the best available share class for each underlying holding when reporting in Lipper.
